

K Body® Clamps

America's Favorite Woodworking Clamp

ISO 9001 CERTIFIED

It's All About the Quality.

STEEL JAWS ARE TOTALLY ENCASED IN SUPER-POLYAMID ... provides for the ultimate in strength and stability while offering a non-marring, glue-resistant surface.

LARGE, PARALLEL JAWS ... distribute even pressure across the entire surface to stop bowing, turning and lifting of work. This Bessey design guarantees the jaws are always at a 90° angle to the rail. "No other clamp does what a K Body does!"

OVER SIZED, ACME THREAD ... for positive grip with minimum turns.

LOCKING SYSTEM WON'T LET GO ... features dual set screws that are permanently molded into the sliding arm ... interlocks with serration on both sides of the rail for non-slip grip.

ERGONOMICALLY DESIGNED WOOD HANDLE ... for a comfortable grip. Can be hand tightened to 1,000 lbs. clamping pressure.

COLD DRAWN, PROFILED STEEL RAIL

... made in Bessey's own mill for total control on quality.

Unique profile – engineered for extra strength to minimize flexing or bending, common with flat rails found on most ordinary bar clamps.

Galvanized to prevent stains on wood and won't rust.

KP Framing System: Rail and Stile Jig for K Body Clamps

KP Blocks are packaged 4 to a set. They are used with four K Body clamps (not included) for quick, easy and perfectly square set-up for projects like raised panel doors, entrance doors, cabinets, window frames, picture frames, boxes and so on. The glue-resistant blocks can be used with all K Body clamps from 12" to 98".

Can be screw-mounted to work surface.

CATALOG NUMBER	QTY. PER SET	APPROX. WEIGHT
