Little Footprint - Giant Profits!

CAMaster Stinger CNC Router is a full-functioning professional CNC router, sized to fit into tight budget, and to *fit into tight spaces!* The Stinger comes with standard features that are unheard of on other machines. Our competitors call them "options". We call them necessities.

The Stinger is a very solid CNC router that boasts a cast frame construction & solid gantry. Our smallest model, the SR-23 "tabletop" model is 450 lbs. It is a heavyweight in its size class.

Couple this with CAMaster's VirtualCNC Lite Windows-based G-code CNC Controller, and you have a versatile, easy-to-use workhorse for the small shop or major production facilities producing smaller parts. VirtualCNC Lite is compatible with all programs that output industry-standard G-code CNC files.

The SR Series comes standard with an ultra-smooth, extremely quiet and precise high-frequency spindle. This spindle is perfect even for small shops with close neighbors!
