

Taking the lead with a systematic approach: The new MAFELL guide rail system F.

The new, convenient guide rail facilitates clean and exact cutting without tearing in conjunction with numerous MAFELL machines. The various standard rails can be joined together with self-aligning connecting pieces to obtain the required length for the job.

Extendable to any length

The rail can be extended with a connecting piece, accessible from above, that simply slides into the parked position when not in use.

Additional fastening

The guide rail can be additionally secured with two screw clamps if necessary.

Plug-in end profile

The supplied plug-in end profile prevents cables and suction hoses becoming caught.

Clean cuts

A rubber lip, guide edge and tear protection all in one – consistently facilitates high-precision cutting without tearing.

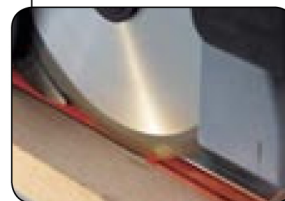

Guaranteed non-slip

Two detachable holding strips on the underside of the rail offer outstanding grip and protect the surface of the work.

Removable rubber lip

The rubber lip has to be cut to width before the rail is used for the first time. It can be renewed later without any adhesive.

The guide rail system F is compatible with the following MAFELL portable circular saws:

KSS 400 · KSS 400/24 V · KST 55 S · KST 55 SE · MS 55 · MS 55/24 V · KSP 55 F · KSP 55/24 V · KSP 65 F · KSP 85 Fc · MKS 130 Ec
